

NeuroImpulse Protocol International Symposium

SPLIT, CROATIA
18 – 24 APRIL 2021

New & exciting Course Content **exclusive** to Croatia

- Womens Health & NIP care** + More **practical** learning with increased clinic sessions
- Paediatric patient & NIP care** + Hear from the founder, **Dr Neil Davies** , via live stream

Meet the Team

NeuroImpulse Protocol developer and founder, Dr Neil J Davies, graduated from Palmer College in 1977. Dr Davies has been in continuous active practice and chiropractic education at both undergraduate and postgraduate level for over 40 years and has now taught NIP to chiropractors in 12 countries including his home country of Australia. Dr Davies is spending his twilight years furthering the advancement of NIP and providing professional mentoring and NIP training to chiropractors and health providers around the globe.

Dr Ailsa van Poecke graduated from the Anglo-European College of Chiropractic in 1999. Ailsa was first introduced to NIP in 2003 and has used NIP exclusively in her work since then. She has completed a Masters Degree in chiropractic paediatrics which culminated in publication of an article in JMPT. She is currently practicing NIP in Deventer, The Netherlands and in conjunction with Dr Neil Cox has been teaching NIP throughout Europe since 2006.

Dr Patrick McPhie graduated from Macquarie University in Sydney, Australia and took up private practice in Glasgow, UK. It was during his time there that he was introduced to NIP at the inaugural training seminar in Dublin. He was so impressed with what he saw that he came to work in one of the Kiro Kids clinics in Melbourne. Dr McPhie now runs 2 successful NIP clinics in Melbourne, Victoria and has been a member of the NIP global teaching team since 2010.

Dr Neil Cox graduated from the Anglo-European College of Chiropractic in 2002 and has been in continuous practice in the UK ever since. He was introduced to NIP at an Adjusting the Child seminar presented by Dr Neil J Davies and was so impressed by what he saw that he undertook to study every aspect of NIP in the following years. He is now practicing in Bournemouth and in conjunction with Dr Ailsa van Poecke teaches NIP throughout the UK and Europe for Kiro Kids.

Course Outline

Monday 19th April

8.30am – 10.00am	Day 1 Opening Assembly Neurological Foundations and Recent Updates A model for NIP education 2018 – 2020
10.00am – 10.30am	Morning Refreshments
10.30am – 12.30pm	The Upper Cervical Complex – Review and Workshop
12.30pm – 1.30pm	Lunch
1.30pm – 2.00pm	NIP case studies A NIP OSCE: From clinical history to subluxation diagnosis
2.00pm – 4.00pm	Lumbopelvic Complex – review and clinical workshop

Tuesday 20th April

8.30am – 10.00am	Day 2 Opening Assembly NIP Patient care for attendees and their families
10.00am – 10.30am	Morning Refreshments
10.30am – 12.30pm	NIP Related Pre-conceptive Care Program
12.30pm – 1.30pm	Lunch
1.30pm – 3.30pm	Women in transition – NIP care of the dysponetic woman pre and post-menopause
3.30pm	Private NIP consultation

Course Outline

Wednesday 21st April

- 8.30am – 10.00am Day 3 Opening Assembly
NIP patient care by appointment.
- 10.00am – 10.30am **Morning Refreshments**
- 10.30am – 12.30pm Shoulder Girdle, Lower Cervical Spine,
Thoracic Spine and Ribs
- 12.30pm – 1.30pm **Lunch**
- 1.30pm – 3.30pm Recognition and NIP based management
of common clinical conditions of
pregnancy

Thursday 22nd April

- 8.30am – 10.00am Day 4 Opening Assembly
Clinical Syndrome Management
- 10.00am – 10.30am **Morning Refreshments**
- 10.30am – 12.30pm The Cranial Connection Revisited
- 12.30pm – 1.30pm **Lunch**
- 1.30pm – 3.30pm Organosensory syndromes specific to
women's health issues

Course Outline

Friday 23rd April

- 8.30am – 10.00am Day 5 Opening Assembly
Adjusting the Infant Patient
- 10.00am – 10.30am **Morning Refreshments**
- 10.30am – 12.30pm Fragmentation
- 12.30pm – 1.30pm **Lunch**
- 1.30pm – 3.30pm NIP Based Management of the Pre and Post-natal patient

Saturday 24th April

- 8.30am – 10.00am Day 6 Opening Assembly
Retained Primitive reflexes, latency and dark patterns
- 10.00am – 10.30am **Morning Refreshments**
- 10.30am – 12.30pm Front of the body subluxation (Above the Diaphragm)
- 12.30pm – 1.30pm **Lunch**
- 1.30pm – 3.30pm Front of the body subluxation (Below the Diaphragm)
- 3.30 – 3.45pm Closing Assembly

Sessional Description

Monday 19th April

08.30am – 10.00am **Opening Assembly**

During this 90-minute session, delegates will be welcomed to a week-long extravaganza of evidence informed neurological chiropractic education. The fundamental neurological basis for NIP will be reviewed in detail and updates from Langkawi 2018 will be included. Following this presentation, an outline of currently available options for NIP training and education will be detailed.

10.30am – 12.30pm **Upper Cervical Complex – Review & Clinical Workshop**

Over time, the critical fundamentals of the upper cervical examination can be “lost in translation” and the fundamentals need to be revisited. In this session, the elements of the upper cervical examination will be reviewed and then delegates will have the opportunity to have their techniques of examination critiqued by the teaching staff.

1.30pm-2.00pm **NIP Case Study**

In this session, you will be taken through a critical clinical thinking exercise involving case history, relevant physical examination and NIP assessment leading to the point of intrusion. It will be presented as an OSCE style demonstration which runs parallel to the actual private practice clinical environment.

2.00pm – 4.00pm **Lumbopelvic Complex – Review & Clinical Workshop**

Similar to the upper cervical complex presentation and workshop, this session will focus on the fundamentals that need to be revisited. In this session, the elements of the lumbopelvic examination will be reviewed and then delegates will have the opportunity to have their techniques of examination critiqued by the teaching staff.

Tuesday 20th April

08.30am – 10.00am **Opening Assembly**

During this 90-minute session, delegates will have the opportunity to be consulted and offered NIP treatment by a member of the NIP teaching team. You may choose to be the patient or offer the opportunity to an accompanying person such as a spouse, a child or friend.

10.30am – 12.30pm **NIP Related Pre-conceptive Care Program**

This is a completely new session and we are very excited about it at Kiro Kids. You will be taken through a 7 step pre-conceptive care program that can literally be implemented in your clinic upon your return from the symposium. This program is highly evidence based and offers your patients a wonderful brain hygiene focussed approach to pregnancy. Your patient will love it and it will lead on to pregnancy care, post-partem care and the care of the infant. A truly holistic and scientific approach to conception.

1.30pm-3.30pm **Woman in transition – NIP care of the dysponetic woman pre and post-menopause**

This is a further new to symposium clinical care session for the woman suffering from dysponesis. The early childhood causes, the ages of appearance, typical clinical presentation and the NIP management program will be discussed in detail. We are delighted to be able to offer this session at this symposium for the first time as it represents a big step forward for the use of NIP in women’s health care, particularly at this often-difficult time of biological transition. Recognizing the signs of dysponesis in your female patients and having a positive, drug-free, neurologically based, hygienic approach to management will be invaluable for so many of your patients.

3.30pm **Private NIP consultations**

A limited number of appointments with the teaching staff will be made available at this time for those who need care for themselves or an accompanying person but feel uncomfortable with doing so in a public observation forum. Appointments will need to be made ahead of time with the Kiro Kids office staff

Sessional Description

Wednesday 21st April

08.30am – 10.00am

Opening Assembly

During this 90-minute session, delegates will have the opportunity to be consulted and offered NIP treatment by a member of the NIP teaching team. You may choose to be the patient or offer the opportunity to an accompanying person such as a spouse, a child or friend.

10.30am – 12.30pm

Shoulder Girdle, Lower Cervical Spine, Thoracic Spine & Ribs

This session will focus on the fundamentals around the shoulder girdle, lower cervical spine, thoracic spine and ribs that need to be revisited. In this session, the elements of the spinal and rib examination will be explored and then the shoulder girdle with its particular clinical nuances when the Shimizu reflex is involved will be reviewed. Delegates will have the opportunity to have their tech of examination critiqued by the teaching staff.

1.30pm-3.30pm

Recognition and NIP based management of common clinical conditions of pregnancy

This is another new to symposium clinical care session, this time for the pregnant woman. You will be presented with a series of commonly occurring clinical conditions that arise during pregnancy. NIP based management programs will be presented along with the signs and symptoms that would require referral for co-management. This session covers a wide range of pathophysiological conditions and pathologies. Implications for specific aspects of NIP will be presented, along with common sense home based supportive management strategies.

Thursday 22nd April

08.30am – 10.00am

Opening Assembly & Clinical Syndrome Management

During this 90-minute session, the focus of the teaching will be the NIP based management of common pain syndromes such as lumbar disc protrusion, sprain/strain injury, facet syndrome and sacroiliac syndrome. Given the significant percentage of our patient population presenting with these pain syndromes, this is a cutting edge presentation not to be missed.

10.30am – 12.30pm

The Cranial Connection Revisited

This session will revisit the entire NIP cranial assessment, diagnostic recognition of cranial subluxation types, associated respiratory phase and intrusion technique. The role of the centre of mass will be central to the teaching as will the unique manner in which cranial subluxation is diagnosed and treated in infants. A workshop will also be conducted where delegates can have their technique of examination and clinical interpretation assessed by one of the teaching staff.

1.30pm-3.30pm

Organosensory syndromes specific to women's health issues

This is another new to symposium clinical care session, this time for women in general. You will be presented with a series of commonly occurring clinical conditions that may arise across the female life cycle that are amenable to NIP based management with particular emphasis on the organosensory subluxation. The teaching in this session will equip you to offer hygienic, natural and drug free management to a wide range of conditions affecting women.

Sessional Description

Friday 23rd April

08.30am – 10.00am

Opening Assembly & Adjusting the Infant Patient

During this 90-minute session, you will be taught how to adapt the NIP examination protocol and how to apply the NIP techniques of intrusion to the child in the first year of life. The focus will be on the central axis and shoulder girdle subluxation syndromes.

10.30am – 12.30pm

Fragmentation

A phenomenon that may occur following the application of impulse anywhere in the body, but more particularly in the central axis is that of fragmentation. This phenomenon is described simply as one element of the total neurotag pattern persisting following intrusion that carries the potential for pattern neogenesis and must be eliminated in a time sensitive manner. The diagnostic recognition of fragmentation will be presented for both its dural and extradural manifestations.

1.30pm-3.30pm

NIP Based Management of the Pre & Post-natal patient

This is another new to symposium clinical care session, this time for late stage pregnancy and the immediate post-natal period. You will be presented with a series of commonly occurring clinical conditions that may arise at this critical time which are amenable to NIP based management with particular emphasis on common pain syndromes. The teaching in this session will equip you to offer hygienic, natural and drug free management to women in the final difficult days of pregnancy and the period following birth when a woman often needs the most help from her chiropractor.

Saturday 24th April

08.30am – 10.00am

Opening Assembly & Retained Primitive reflexes, latency and dark patterns

During this 90-minute session, you will be taught how to adapt the NIP examination protocol and how to apply the NIP techniques of intrusion to the child in the first year of life. The focus will be on the central axis and shoulder girdle subluxation syndromes.

10.30am – 12.30pm

Front of the body subluxation (Above the Diaphragm)

As NIP has evolved across the years, some basic and critical fundamentals of the front of body subluxation seem to have been either de-emphasised by too many NIP practitioners or over emphasised. This review session will take you once again step by step from the upper cervical examination to the appropriate point of intrusion in the front of the body structures lying above the diaphragm. In this session, these diagnostic elements will be reviewed and then delegates will have the opportunity to have their techniques of examination critiqued by the teaching staff.

1.30pm-3.30pm

Front of the body subluxation (Below the Diaphragm)

Similar to the front of the body above the diaphragm, these structures lying below the diaphragm will be the focus of the diagnostic algorithm. The many complexities of the pubic symphysis subluxation and the involvement of the rectus abdominus and linea alba will be the area of concentration. The final topic in this session will be the role scarring plays in NIP and how one determines involvement and direction of thrust.

REGISTRATION FORM

NeuroImpulse Protocol Symposium

SPLIT, CROATIA
18 – 24 APRIL 2021

Name: _____

Email: _____

13 x monthly interest free payments from Mar 1 2020;

Credit card number: _____

card expiry: _____

OR

Please send me a secure link to make payment in full via Stripe.

Registration fee: \$2100aud

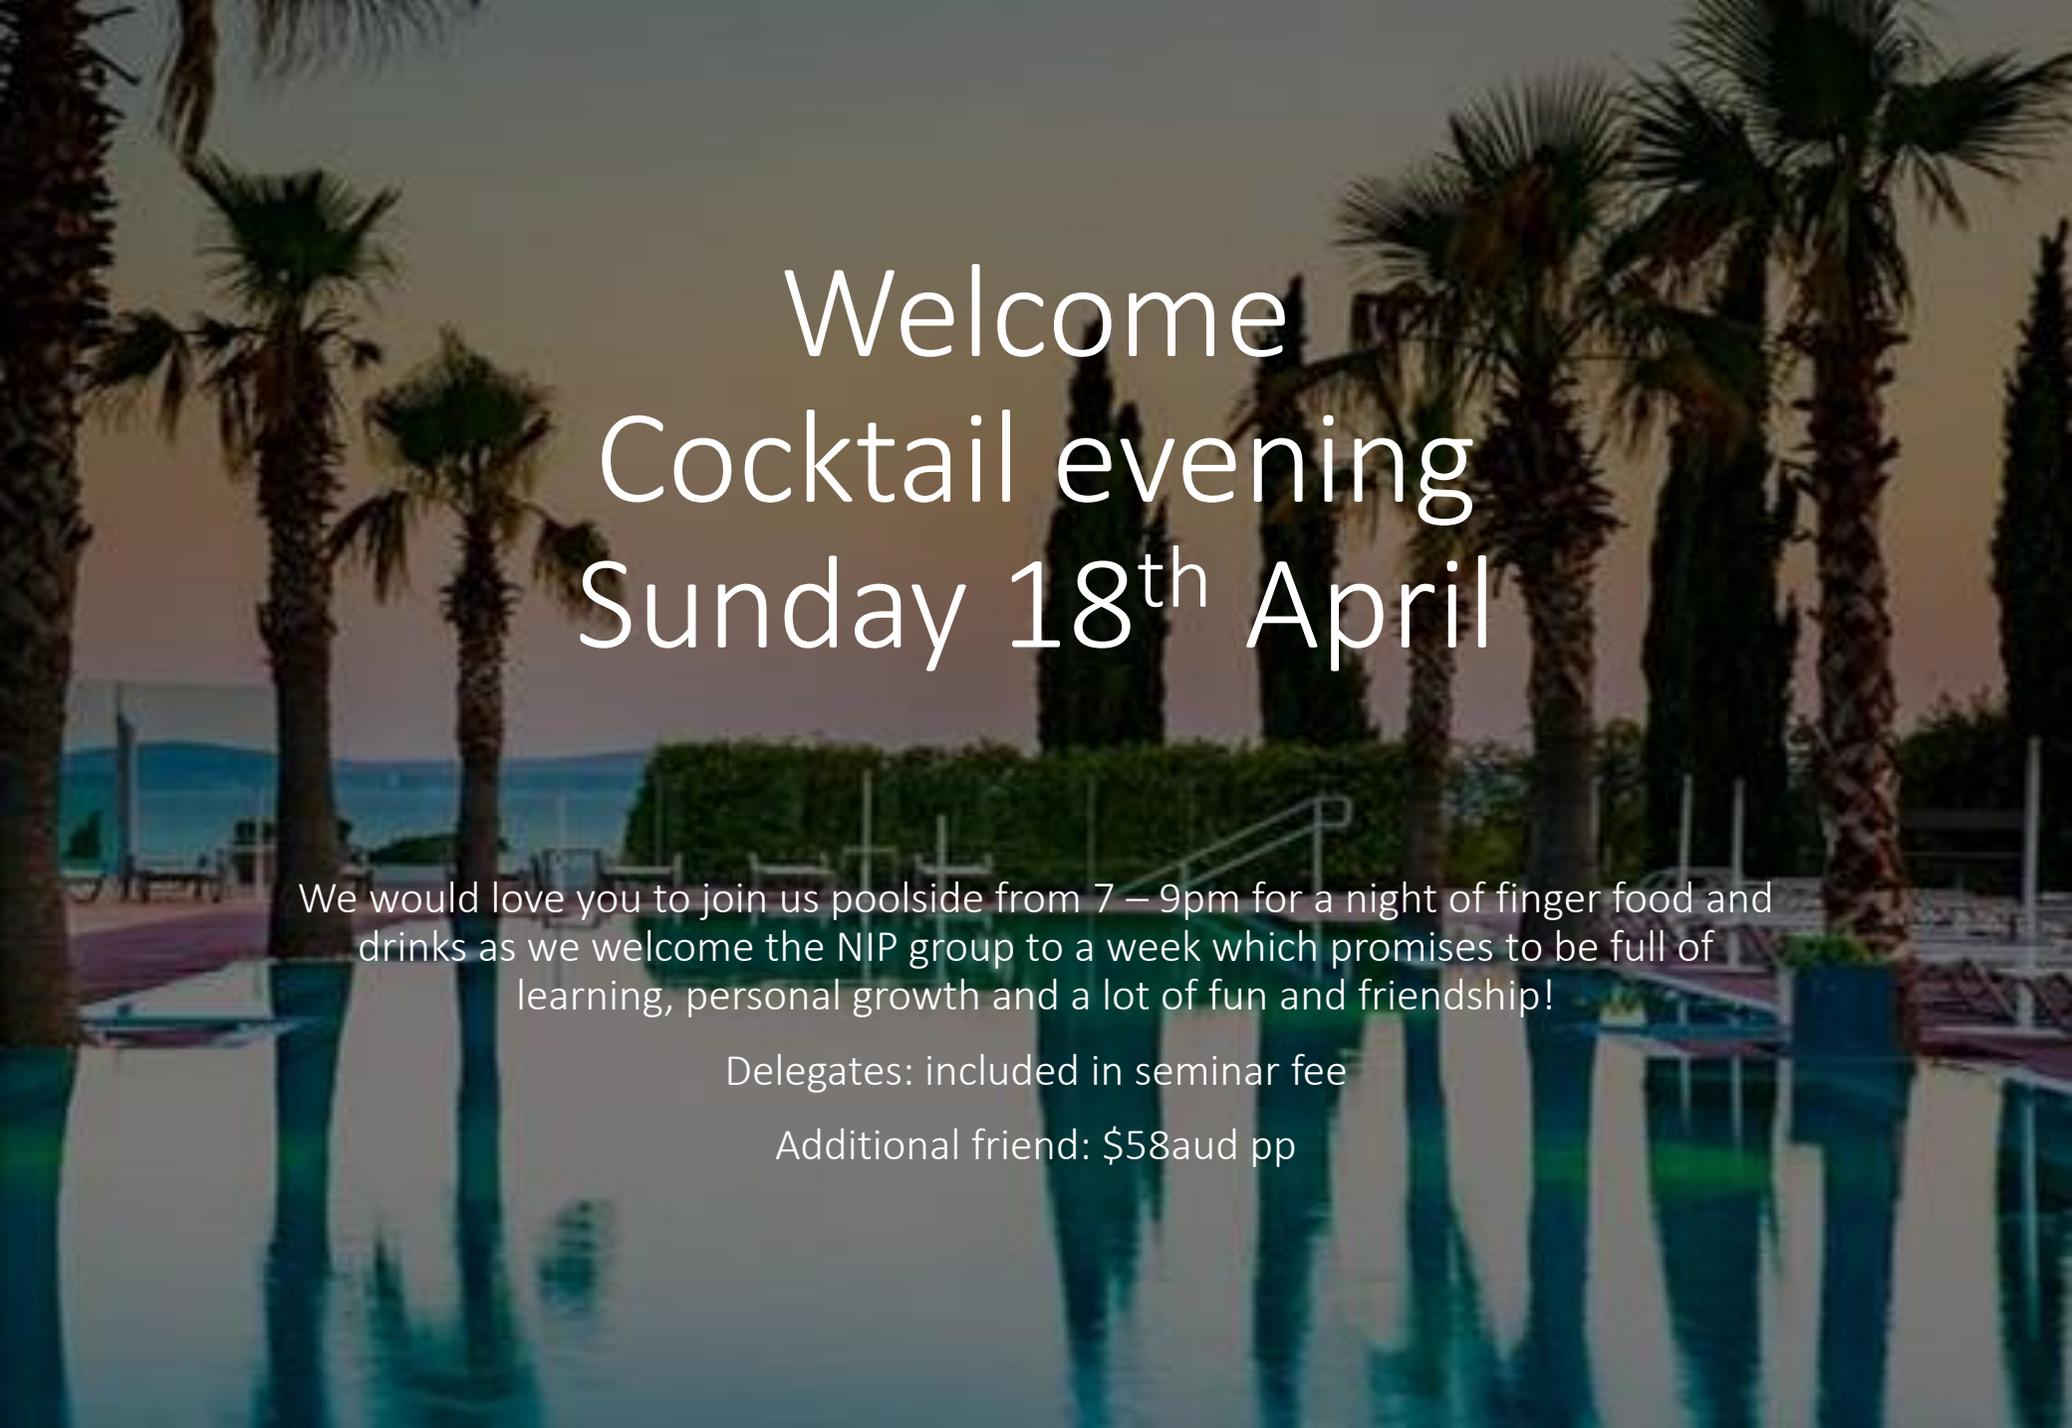

\$1950aud NIP member

On the Couch with
Dr Neil Davies
8pm Wednesday 21st April

The first 50 registrations received will have free entry to hear from Dr Neil Davies, via live stream, about current developments in NIP & brain research, future of NIP and to answer your questions. Don't delay..... Register today and be part of this unique and limited opportunity!

A tropical poolside scene at dusk. The background shows a swimming pool with several palm trees and a clear sky. The text is overlaid on the image.

Welcome Cocktail evening Sunday 18th April

We would love you to join us poolside from 7 – 9pm for a night of finger food and drinks as we welcome the NIP group to a week which promises to be full of learning, personal growth and a lot of fun and friendship!

Delegates: included in seminar fee

Additional friend: \$58aud pp
